## AMENDMENTS TO THE CLAIMS 1. (Currently amended) A lighting system comprising: 1 2 a light source, a means of collecting and focusing light from said light source, 3 an aperture, - 4 at least one color filter, and 5 - 6 an image lens; wherein 7 a light beam from said light source is focused through said aperture to define an object to be projected, said aperture being positioned upstream of said color filter, and 8 9 said filter comprises a first gradient region that is partially coated with a pastel color 10 filter medium, and a second gradient region that is partially coated with a saturated color 11 filter medium. 1 2. (Original) The lighting system of claim 1 wherein: said filter and said image lens are deployed in an area of said light beam where a 2 3 diameter of said light beam is smaller than a diameter of said aperture. 3. (Currently amended) The lighting system of claim 1 wherein: 1 2 said filter is a two stage filter, said filter comprising

a second region that is coated with said saturated color filter medium.

a first region that is coated with said pastel color filter medium,

and

a first gradient region that is partially coated with a pastel color filter medium,

a second gradient region that is partially coated with a saturated color filter medium.

4. (Original) The lighting system of claim 3 wherein:
said first region overlaps said second gradient region.
5. (Original) The lighting system of claim 3 wherein:
said filter is formed from a single substrate.
6. (Original) The lighting system of claim 3 wherein:
said filter is formed from two substrates, said substrates being bonded together to
form said filter.
7. (Original) The lighting system of claim 6 wherein:
said first region and said first gradient region are formed on a first one of said
substrates, and
said second region and said second gradient region are formed on a second one of
said substrates.
8. (Original) The lighting system of claim 3 wherein:
a centerline of said filter lies on an arc.
9. (Original) The lighting system of claim 8 wherein:
said filter is formed from a single substrate.

1	10. (Original) The lighting system of claim 8 wherein:
2	said filter is formed from two substrates, said substrates being bonded together to
3	form said filter.
1	11. (Original) The lighting system of claim 10 wherein:
2	said first region and said first gradient region are formed on a first one of said
3	substrates, and
4	said second region and said second gradient region are formed on a second one of
5	said substrates.
1	12. (Original) The lighting system of claim 3 wherein:
2	a centerline of said filter lies on a straight line.
1	13. (Original) The lighting system of claim 8 wherein:
2	said filter is formed from a single substrate.
1	14. (Original) The lighting system of claim 8 wherein:
2	said filter is formed from two substrates, said substrates being bonded together to
3	form said filter.
1	15. (Original) The lighting system of claim 10 wherein:
2	said first region and said first gradient region are formed on a first one of said

3	Substrates, and
4	said second region and said second gradient region are formed on a second one o
5	said substrates.
1	16. (Original) A two stage filter comprising:
2	a first gradient region that is partially coated with a pastel color filter medium,
3	a first region that is coated with said pastel color filter medium,
4	a second gradient region that is partially coated with a saturated color filter medium
5	and
6	a second region that is coated with said saturated color filter medium.
1	17. (Original) The lighting system of claim 16 wherein:
2	said first region overlaps said second gradient region.
1	18. (Original) The two stage filter of claim 16 wherein:
2	said filter is formed from a single substrate.
1	19. (Original) The two stage filter of claim 16 wherein:
2	said filter is formed from two substrates, said substrates being bonded together to
3	form said filter.
1	20. (Original) The two stage filter of claim 19 wherein:
2	said first region and said first gradient region are formed on a first one of said

3	substrates, and
4	said second region and said second gradient region are formed on a second one of
5	said substrates.
1	21. (Original) The two stage filter of claim 16 wherein:
2	a centerline of said filter lies on an arc.
1	22. (Original) The two stage filter of claim 21 wherein:
2	said filter is formed from a single substrate.
1	23. (Original) The two stage filter of claim 21 wherein:
2	said filter is formed from two substrates, said substrates being bonded together to
3	form said filter.
1	24. (Original) The two stage filter of claim 23 wherein:
2	said first region and said first gradient region are formed on a first one of said
3	substrates, and
4	said second region and said second gradient region are formed on a second one of
5	said substrates.
1	25. (Original) The two stage filter of claim 16 wherein:
2	a centerline of said filter lies on a straight line.

26. (Original) The two stage filter of claim 25 wherein: 1 2 said filter is formed from a single substrate. 27. (Original) The two stage filter of claim 25 wherein: 1 said filter is formed from two substrates, said substrates being bonded together to 2 3 form said filter. 28. (Original) The two stage filter of claim 27 wherein: 1 said first region and said first gradient region are formed on a first one of said 2 substrates, and 3 said second region and said second gradient region are formed on a second one of said substrates. 5
